Same
issue

The use-case diagram:

Same problem

Description of use-case:

Situation: The company has many branches, and every branch has a manager. One branch can work for different construction sites. Different branches can work on the same construction site. Every Branch will have the same kind of departments and department will have staff members working for that department.

Use case Name: Adding Staff to Department

Actor: Company Manager

Precondition: Staff has no department.

Post condition: staff are added to Department.

User Actions

System Response

i. The Company Manager enters his credentials to the system.	i. System responses with the validation message.
ii. The Company Manager checks if the staff and department's information are correct and available. <i>e1, e2</i>	ii. System responses with the availability of staff and department message.
iii. The Company Manager Adds the staff to department.	iii. The system responses with the confirmation message.

Exception 1: credentials are not validated. No Adding Staff to Department. Use case ends.
